

InMATOSINHOS?

Matosinhos local - create an online “marketplace/directory” with multiple local assets;

- stores;
- restaurants;
- market;
- services;
- transports; etc... (consider time frame for completion to complete all categories)

Small intro of benefits to creating a local commerce “chain”;
(local news reports, social network tags --- #matosinhos #leçadapalmeira)

Considering the above to create a user friendly experience to:

- SEARCH - through the website; ex: The dish you would like to eat; Articles in stores;
- search results (possibly listed in diverse categories, maps to filter results)
 - LOGIN - to create a “booking/reservation REQUEST ex: For that surf class you’ve always wanted;
 - (Use of “internal APIs” ----- fetch data from system’s data base)
- (possible checkboxes to organize and filter elements within each category?!)
